1 Introduction

This Project Vision Document provides an overview of a proposed logistics and operations management application tailored to the service and hospitality sector. The system is designed to centralize operational functions such as workforce scheduling, resource allocation, and communication management into a unified platform. The goal is to minimize inefficiencies, strengthen coordination among staff, and ensure the consistent delivery of high-quality service.

1.1 Purpose

The purpose of this Project Vision Document is to establish a shared understanding of the project's objectives, scope, and anticipated outcomes. Organizations in the service and hospitality industry frequently encounter challenges such as fragmented communication, inconsistent workforce scheduling, and difficulties with monitoring resource usage. By implementing a digital logistics solution, the project aims to:

- Streamline workforce management through efficient scheduling and task assignment.
- Enhance visibility and tracking of operational resources.
- Provide a communication channel that supports real-time updates and collaboration.
- Improve overall operational consistency and service quality.

1.2 Scope

The scope of this project encompasses the design and development of a digital logistics and operations management application tailored for the service and hospitality industry. The system will centralize key operational functions, including workforce scheduling, task assignment, resource tracking, and internal communication. By providing a unified platform, the application aims to reduce inefficiencies, improve staff coordination, and support data-informed decision-making.

The project will focus on internal operations and exclude customer-facing features such as reservations, marketing, or financial accounting. Its primary emphasis will be on enhancing organizational efficiency, consistency of service delivery, and adaptability to real-time operational changes.

1.2.1 In Scope

- Workforce scheduling and shift allocation.
- Operational resources and inventory tracking.
- Task assignment and monitoring across service functions.
- Internal communication through digital notifications and updates.
- Analytical reporting on workforce productivity and resource utilization.

1.2.2 Out of Scope

- Financial accounting and payroll management.
- Customer relationship management or marketing tools.
- External booking and reservation systems.
- Third-party integrations outside of the defined operations framework.

1.3 Definitions, Acronyms, and Abbreviations

Term	Explanation
Application (App)	The logistics and operations management software is being developed.
Workforce Scheduling	The systematic allocation of employees to specific shifts or service periods.
Resource Inventory	The available stock of materials, supplies, or equipment required for service delivery.
Task	A defined operational duty assigned to a staff member.
Real-Time Updates	Instant digital notifications of changes in schedules, resources, or tasks.
POS (Point of Sale)	A system used to process transactions and track sales of goods and services.
Administrative Panel	The management interface for overseeing operations within the application.

2 Positioning

2.1 Business Opportunity

The downfall of high-octane hospitality environments always has been the choppy methods of communication between different roles within the workplace. Too much time is spent shouting, texting, and searching for the person you're looking for when that time could be better spent doing your job and improving the overall customer experience.

Our application proposes a new way of organizing the hospitality workspace by containing all useful information in one place while implementing a reliable way of communicating with others. These features would dramatically reduce service delays, improve staff coordination and cut inventory waste.

2.2 Problem Statement

The Problem of	Inefficient staff communication and disjointed operational tools
affects	Managers, front of house staff, back of house staff
the impact of which is	Delays in service delivery, bottle necks in operations, reduced customer satisfaction
a successful solution would be	A successful solution would be a flexible, cost-effective hospitality communication and logistics system that can be easily configured by managers and accessed by staff. The product would support discreet, role-based communication in real-time. This can involve sending custom buzz notifications, providing live task assignments, and tracking inventory usage throughout service operations. In addition, a hospitality management system can have a rich variety of features to coordinate, monitor, and control as well as generate post-event analytics. The user would be able to access the system locally on-site and remotely across multiple venues. It will be able to integrate with existing scheduling and reporting practices.

Table 1 Problem Statement

2.3 Product Position Statement

For	Service staff and managers in hospitality settings
Who	Need a simplified method for managing logistics, task distribution, and communication in fast-paced, high-pressure settings

The Club Management Mobile App	is a mobile-first application
That	Enhances service efficiency and operational decision making by enabling the sending of discrete role-based alerts, scheduling management, inventory tracking, and post-event analytics generation.
Unlike	existing communication channels like texting, phone calls, or manual tracking systems that don't offer role-based dashboards, multi-venue monitoring, or discreet notifications
Our product	supports both single-location and multi-location operations by integrating post-event reporting, task and inventory management, and real-time notifications into a single platform that is accessible by all staff positions.

2.4 SWOT Analysis

<Reference: https://www.businessballs.com/strategy-innovation/swot-analysis/)

Strengths	Weaknesses
Rather than serving as a general communication tool, hospitality-specific design is tailored for bars, restaurants, and event locations.	high reliance on mobile devices; communication may be hampered if phones die or Wi-Fi goes off.
Staff members can react without touching devices with unclean or gloved hands thanks to buzz tones and notifications that promote hands-free awareness.	Over-notification risk: An excessive number of buzzes or notifications may overwhelm or irritate employees.
Enhancement in service speed: less time is lost looking for teammates or restating directions.	
Opportunities	**Threats**
expansion into the larger hospitality industry, which includes event planning, hotels, stadiums, and restaurants.	Reliance on cellular networks, Bluetooth, or Wi-Fi is a single point of failure when it comes to technology.
Future advancements in wearable technology might include buzz alert wristbands or smartwatches.	Over-reliance on the app: If employees rely too much on the app, system failure could cause operations to collapse.

Buzz patterns that can be altered to suit various staff positions or levels of urgency	

3 Stakeholder and User Descriptions

3.1 Stakeholder Summary

Stakeholder Name	Represents	Role
Development Team	Team that is responsible for the design and development of the application.	Planning and developing deliverables to present to the sponsors.
Owners	Financial and literal owners of the establishments utilizing the application.	Provide business goals and manage project scope.
Managers	Overseers of operations in the venues.	Scheduling and task management.
Bartender	Bar staff responsible for preparing and serving drinks during service hours.	Provide input on fast-paced bar communication needs, live inventory updates for beverages, and quick alerts when supplies run low. Test and validate features that help them coordinate with service attendants and BOH support without leaving the bar.
Kitchen Staff	Cooks who receive orders from customers, prep food, and work behind the scenes.	Identify requirements for streamlined order tracking, real-time status updates, and inventory alerts (e.g., ingredient shortages). Participate in pilot testing of the hands-free communication system to ensure it works in a high-heat, high-noise environment.
Back of House Support Staff	Managers of the back-of-house inventory.	Identify pain points with manual inventory tracking and delayed communication; test inventory-update and alert features.
Service Attendants	Front-of-house, primary customer service.	Provide insight into high-volume service challenges and test real-time table/guest tracking and quick staff-to-staff communication.
Bussers	Individuals who are responsible for keeping the club clean and organized	Contribute feedback on quick, hands-free alerts and coordination with service attendants.

Stakeholder Name	Represents	Role
Security	Individuals that make sure the club stays safe for all people involved.	Provide requirements for instant alerts, staff-location mapping, and crowd-management communication.
Customers	Receivers of service.	Beneficiary of improved efficiency and customer service.

Table 3 Stakeholder Summary

3.2 User Summary

User Name	Description	Responsibilities	Stakeholder
Rock Lee	Multi-club manager that moves back and forth between locations often.	Assigning tasks to employees. Manage the schedule, including scheduling people for work and viewing who is working on any given night. View information about the multiple clubs that I manage.	Manager
Arthur Leywin	Back of House staff member responsible for managing the stock of food and drinks.	Contacting members of the team when a task arises. Viewing stock digitally so that I can easily communicate stock to the front of house staff at any point.	BOH Support
Jane Doe	Extroverted bartender who interacts with hundreds of customers every night.	Keeping track of bar tabs.	Bartender
Charlize Chin	Upbeat individual who thrives in fast paced environments.	Keeping track of my tables, whether that be for orders or just number of attendees. Contacting bussers when it is time to clear a table/clean up something.	Service Attendant

User Name	Description	Responsibilities	Stakeholder
Kal Elington	Security guard with zero tolerance for tomfoolery.	Verifying customer IDs at the door. Kicking out individuals who have broken the rules of the establishment.	Security
Jerome Asmerom	Part-time busser who is okay with doing the dirty work in the establishment.	Contacting other bussers/managers when needed on the floor. Responding to requests from other staff members.	Busser
Francois Dubois	Line cook	Communicating with the BOH Support staff regarding stock levels. Communicating client side changes to orders	Kitchen Staff

Table 4 User Summary

4 Stakeholder Requirements

ID	Requirement	Stakeholder
SR1	The system will provide a real-time, role-based messaging system that utilizes full length messages as well as an innovative unique buzz pattern system so staff can communicate efficiently.	Busser, Bartender, Service Attendants, Security, Kitchen Staff
SR2	The system will include an inventory management system that allows authorized staff to view and edit the stock of items within the workplace.	Back of House Staff, Kitchen Staff, Bartender
SR3	The system will include a secure login mechanism that authenticates each user with unique credentials.	Managers, Back of House Staff, Kitchen Staff, Bartenders, Service Attendants, Security, Bussers
SR4	The system will contain a schedule for all users to view their role on any given night as well as who else is working with them.	Managers, Back of House Staff, Kitchen Staff, Bartenders, Service Attendants, Security, Bussers
SR5	The system will enable staff to track tabs and orders from customers.	Bartenders, Service Attendants
SR6	The system will allow for post-event/post-night reports and analytics.	Owners, Managers
SR7	The system will project emergency alerts to specific members at a moment of need.	Bussers, Managers, Security
SR8	The system will allow for users to switch between different locations if they work/own multiple venues.	Owners, Managers

Table 5 Stakeholder Requirements

5 System Features

ID	Feature	Stakeholder Requirement ID
SF1	Real-Time Role-Based Messaging – Enables staff to send full-length messages and unique buzz/vibration alerts for efficient communication in loud, crowded environments.	SR1
SF2	Inventory Management – Lets authorized staff view, update, and track stock levels to avoid shortages and streamline re-ordering.	SR2

ID	Feature	Stakeholder Requirement ID
SF3	Secure Login & Authentication – Provides unique user credentials and role-based access to protect data and control permissions.	SR3
SF4	Scheduling & Staffing Dashboard – Displays each user's nightly role and a live roster of co-workers for clear task delegation and accountability.	SR4
SF5	Order & Tab Tracking – Allows staff to manage customer orders and tabs in real time for faster, more accurate service.	SR5
SF6	Post-Event Reporting & Analytics – Generates reports on staffing, inventory usage, and overall performance after each event or night.	SR6
SF7	Emergency Alert Broadcast – Sends priority notifications to designated staff (e.g., security, managers) for rapid response to incidents.	SR7
SF8	Multi-Location Access – Enables users with the proper permissions to switch between different venues while keeping data secure and separate.	SR8

Table 6 System Features

6 Assumptions

- *Users have mobile devices to access the application*
- *Users will have network access*
- *The company will already be established with employees and location(s)*

7 Constraints

- *Limited support staff and IT*
